Examiner's Amendment

IN THE CLAIMS

In claim 4, line 1, "claim 3" has been changed to -- claim 1--.

Allowable Subject Matter

Remaining claims 1, 2, 4, 6 - 13, and 12 - 20 are allowable and the following is a statement of reasons for such an indication.

The prior art of record fail to teach a method for protecting against rollover in a vehicle comprising, among other limitations, determining a critical change rate of a steering angle from a database having critical change rate values corresponding to specific combinations of lateral acceleration and vehicle speed in order to determine a rollover tendency by generating a correction signal indicative of the tendency and sending the correction signal to an actuator.

The prior art of record fail to further teach an active rollover protection system for a vehicle comprising, among other limitations, a database having critical change rate values corresponding to specific combinations of lateral acceleration and vehicle speed and a controller that receives a first, a second, and a third signals, wherein the controller determines the critical change rate value corresponding to the first and second signals, and compares the critical change rate value with the third signal to determine a rollover tendency, the controller sending a signal – the first, the

second, and the third signals being a lateral acceleration signal, a vehicle speed signal, and a rate change steering angle signal, respectively.
